Joint Meeting Odd Fellows and Rebekahs.

The Odd Fellows and Rebekahs gave a very enjoyable reception to their members and families at the Odd Fellows Hall Tuesday night. More than 100 were present and enjoyed the evening very much.

A splendid program of music, speeches and readings was rendered which brought forth liberal applause.

Ice cream, cake and coffee were served.

Put Down Eggs for Winter While the
Prices Are Low.

There is nothing mysterious in the business of egg preserving and no great labor. Eggs are comparatively cheap this spring, a condition which should encourage the housewife to put down a supply for use next winter when prices will rise again.

Rules for keeping eggs in water glass are given by the United States Department of Agriculture. To be preserved properly eggs should be put into water glass when absolutely fresh. The eggs should be clean, but it is better not to wash them. Eggs with dirty shells can be used for immediate consumption and the clean eggs preserved. Cracked eggs, or those with thin or weak shells, should never be used for preservation. The cracked eggs would spoil and ruin the other eggs in the jar also.

Water glass can be bought by the quart from the druggist or poultry supply men. It is a pale yellow, odorless, sirupy liquid. It should be diluted in the proportion of one part of water glass to nine parts of water which has been boiled and allowed to cool. Earthen ware crocks and jars are best containers, since they have a glazed surface, and are not subject to chemical action from the solution.

The crocks or cans should be scalded for perfect cleanliness and allowed to cool before they are used. A six-gallon container will hold 18 dozen eggs and will require about 22 pints of solution. Too large containers are not desirable, breaking some of the eggs. Half fill the container with the water glass solution, put the eggs in it and add more from day to day, until the container is filled. Be sure the eggs are covered with about two inches of water glass solution. Cover the container and put it in a cool place where it will not have to be moved. Use wax paper under the cover to keep the jar tight. It should be looked at every two or three months to make sure the water has not evaporated so that the eggs are too near the surface. If there seems to be any danger of this, sufficient cool boiled water should be added to keep them covered.

Remove the eggs from the solution as desired for use and wash them in clean, cold water. Before boiling such eggs, prick a tiny hole in the large end of the shell with a needle to keep them from cracking. As the eggs age the white becomes thinner and is harder to beat. The yolk membrane becomes more delicate and it is correspondingly more difficult to separate the whites from the yolks.

—Exchange.

MICKIE SAYS

TH' BOSS ALWAYS AS HOW HE IS AS GOOD NATURED AS THE NEXT FELLER BUT THING TIMES WHEN HIS RUN RAGGED WITH WORK WHEN SOME LEISUREL CUBS COMES IN AND PESTERS HIM UNTIL HE WISHES HE WUZ TH' HARDBOILED PROPRIETOR OF A SANDED-OFF SHOOTING IN A PRIVATE BURNING GROUND HARD ON!!!

DEWEY

MONEY

For 20 years we have divided our resources with our customers and found it a pleasure to do so, and have borrowed money to do it with. As you know it is impossible now to do business without money. As we have to pay our bills every thirty days, we can carry you thirty days and no longer, so please don't ask us to do more than our ability to do. When money matters get easier we hope to be stronger financially. Thanking you, I remain, Respectfully,
